

Kronos Fit
Kronos
Zefiro
Livingstone

A woman with blonde hair is sitting in a black folding deck chair on a grassy hill, reading a book. To her left is the side of a light blue campervan with the license plate '295TL'. The background shows a vast landscape with a body of water and distant hills under a sunset sky. A red geometric line graphic is overlaid on the image.

Free to choose

295TL

A motorcaravan for everyone

Roller Team offers a wide selection of models to meet the needs of any customer. The variety of the offer involves all types of motorcaravans and their interior fittings. The offer of models, organised into ranges, is able to meet the different and growing needs of the customer with an increasingly rich product.

Always up to date

The constant technological innovation of the production processes together with a continuous renewal of the product, with cutting edge technical-constructive solutions, allow us to offer a very high quality product capable of lasting over time.

Easy to live in

The interiors are conceived and designed to be functional. Solutions that respond to everyday needs and allow you to experience every space with maximum comfort and simplicity. Environments that can be transformed by simple gestures to offer a different service, yet adapted to different needs.

**For the capacity of the clean water tank with stationary vehicle and the capacity of the grey water tank, please refer to the technical data sheets available on the website.

MASS IN RUNNING ORDER. Includes the weight of the empty base vehicle, the driver (75 kg), fuel and fluid tanks filled to at least 90%, fresh water tank filled to maximum capacity as declared by the manufacturer ref: 'travel', gas cylinder for domestic use with a maximum weight as declared by the manufacturer. The mass in running order, and consequently the payload and/or travel seats, may vary depending on the installed accessories. The Mass in Running Order value shown in the commercial documentation is the value calculated during the homologation procedure and may differ from the delivered vehicle's value due to production tolerances. The legally allowed deviation is $\pm 5\%$. During the purchasing process, it is necessary to verify the weight of the optional equipment intended to be installed on the vehicle.

PAYLOAD. It is the difference between the technically permissible maximum mass and the mass in running order. The payload includes elements for habitation, passengers 'transported' as defined by the manufacturer (excluding the driver), and personal belongings. The minimum payload calculation is based on the following parameters:

- 75 kg for each passenger (excluding the driver)
- 10 kg of luggage for each passenger and the driver
- 10 kg for each meter of vehicle length

The remaining payload can be used for installing accessories or additional luggage. Anything not included in the standard version of the vehicle, both cell and chassis, increases the mass in running order and consequently reduces the payload, potentially reducing the number of approved seats. Available payloads result from the difference between the technically permissible maximum mass and the mass in running order. During the purchasing process, it is necessary to verify the weight of the optional equipment intended to be installed on the vehicle. The weight of non-standard accessories is not included in the mass in running order. Additional accessories and devices reduce the payload by an amount equal to their weight; the weight impact of individual accessories is listed in the appropriate column in the price list or can be requested at our dealers' shops. Please note that the law does not allow exceeding the technically permissible maximum mass, which can be found in the technical sheet specifications. Ensure that the maximum axle loads and the technically permissible maximum mass are not exceeded during full vehicle loading. The number of approved seats may vary depending on the regulations of individual countries regarding circulation.

NOTES - This catalogue does not represent contractual documentation, rather only general information. Trigano S.p.A. reserves the right to change the features and fitting of any of its models without prior notice; all data contained in this brochure is therefore to be considered as indicative and nonbinding. For the above reasons, all information relating to the specifications and equipment of each model must be requested prior to purchase from the dealer, who, as the sole contact person, will confirm or correct the data published by updating the customer on the characteristics and actual equipment of the relevant vehicle being negotiated. Despite careful content checks, possible printing and/or translation errors cannot be excluded. This catalogue does not constitute contractual documentation. Any reproduction, even partial, of the text or contents of this document is prohibited. The weights given in this catalogue are for reference only. Tolerances of $\pm 5\%$ are permitted. In general, special equipment and optional extras increase unladen weight and lead to a reduction in payload. We disclaim all liability in the event of structural modifications made to the vehicle; any assembly, disassembly or modifications carried out at unauthorised workshops may endanger your safety and also lead to the voiding of warranty clauses. For more information on installation and technical details, please contact the authorised sales network.
